Craig Menear
Home Depot
2455 Paces Ferry Rd SE
Atlanta, GA 30339

Dear Mr. Menear,

On behalf of the 66 organizations below and our over 7.5 million members nationwide, we are writing to urge Home Depot to signal its continued dedication to protecting the health of people, pollinators and the planet by removing all products containing glyphosate from store shelves and online sales and by increasing offerings of organic and other safer alternatives. One of Home Depot's competitors, Costco, has already taken these steps by discontinuing products containing glyphosate from all store locations worldwide.¹ B&Q, one of the largest home improvement stores in the United Kingdom, announced a similar policy in May.²

Glyphosate, the active ingredient in the herbicide Roundup®, was determined to be a probable human carcinogen by the World Health Organization International Agency for Research on Cancer and the California Office of Health Hazard Assessment.^{3,4}

In a series of high profile court cases, glyphosate exposure has been linked to non-Hodgkin's lymphoma in farmers, groundskeepers, and homeowners using the herbicide for lawn care.⁵ Juries in three lawsuits so far decided in favor of the plaintiffs, and in June, Bayer agreed to pay over \$10 billion to settle approximately 95,000 additional cases.⁶

In addition to cancer, exposure to glyphosate and the herbicide formulations it's found in has been associated with endocrine disruption, DNA damage, shortened pregnancy, reproductive harm, disruption of the gut microbiome, kidney toxicity, and fatty liver disease.^{7,8,9,10,11,12,13}

In the environment, glyphosate is a primary driver of the decimation of Monarch butterfly populations and has also been linked to bee declines. The use of glyphosate is devastating Monarch butterfly populations by destroying the milkweed plants their young depend on.^{14,15} Monarch populations have declined by 90 percent in the past two decades.¹⁶ Recent research has also shown that glyphosate can disrupt honeybee gut microbiomes, affect larval development, increase colony vulnerability to pathogen infestation, reduce productivity, and impair honeybee navigation, linking the herbicide to declines in bee populations.^{17,18,19,20} In addition, overuse of glyphosate has led to resistant "superweeds" on more than 60 million acres of U.S. farmland, with a resulting increase in toxic herbicides 2,4-D and dicamba.²¹

Home and garden stores can make a significant difference in reducing the use of this toxic product. Research shows that homeowners use up to 10 times more chemical pesticides per acre on their lawns than farmers use on crops.²²

Because Home Depot is a top company dedicated to meeting growing consumer demand for environmentally friendly garden products, we urge Home Depot to:

- Establish a time-bound commitment to eliminate all products containing glyphosate from stores and online sales;
- Increase offerings of organic approved products and other safer alternatives (see the U.S. Environmental Protection Agency's list of active²³ and inert²⁴ ingredients approved as minimum risk pesticides);
- Inventory and assess the toxicity of all pesticide products on offer with the aim of ensuring that eliminating glyphosate sales does not lead to increased sales of products with equal or greater toxicity (e.g. formulations with 2,4-D, dicamba, atrazine, etc.), and consequently set goals to decrease overall sales of toxic pesticide products; and
- Publicize progress toward these commitments to demonstrate that it has taken steps to protect pollinators and human health and will continue to do so.

These actions will build on Home Depot's leadership on pesticides. We applaud Home Depot for its efforts to eliminate use of neonicotinoids from its live plant offerings.

Along with phasing out sales of glyphosate, **we urge Home Depot to ensure that its efforts to eliminate neonicotinoids from plants adequately addresses regrettable substitutes:** newly approved systemic pesticides with chemically similar active ingredients including sulfloxafur and flupyradifurone²⁵ as well as all other pesticides of high concern for pollinators.²⁶ Committing to these actions would demonstrate Home Depot's dedication to sustainability and protecting declining pollinator populations upon which our food supply and healthy ecosystems depend.

Given the widespread harm to human health, pollinators and the environment associated with glyphosate products, the responsible decision is to remove them from store shelves.

Thank you for your attention to this important matter. We look forward to your response.

Sincerely,

Abundance NC
