Board and staff gather in D.C. for a fall retreat

For 38 years Friends of the Earth has provided innovative thinking and cutting edge advocacy to protect, preserve and restore the earth.

This year we have continued to win victories using legal, legislative, corporate and consumer strategies. We've also dramatically expanded the campaigning potential of our online activists.

Our e-activists have sent thousands of messages to decision makers in the U.S. and around the world, making a difference on energy legislation here at home and influencing important governing bodies like the International Maritime Organization. They have also provided valuable support to citizen groups struggling to save rivers and forests in Latin America, Africa and Asia.

In the face of mounting concerns over climate change, our Friends of the Earth International network in 70 countries is diligently promoting sustainable energy investments worldwide.

We are helping citizen groups in the Democratic Republic of Congo, Nigeria and Liberia fight damaging and often illegal mining, forestry and energy exploitation. And in South America Friends of the Earth is raising the red flag on biofuels production that is transforming the world's remaining rainforests into plantations to meet energy needs of northern industrial countries.

Our international work has expanded the fight against global warming and injustice. Recognizing that poor people worldwide are hardest hit by global warming, Friends of the Earth organized a successful gathering of religious and humanitarian aid groups to raise awareness of the serious impacts of climate change on the poor and to push for congressional aid to help the poor cope with the impacts.

Friends of the Earth is setting the terms for the debate on clean energy solutions at home as well as abroad, recognizing and trying to eradicate the root causes of pollution and global warming.

Our work continues to guide the country toward sound energy policy that supports investments in wind and solar and cuts dangerous and destructive subsidies to nuclear energy, coal-to-liquid technology, and corn-based ethanol.

In the late 1990s Friends of the Earth was one of only two national environmental groups petitioning EPA to regulate carbon dioxide as a pollutant. State attorneys general joined our fight, and this year the Supreme Court ruled in our favor, setting a gigantic precedent for global warming litigation.

The Supreme Court also gave Friends of the Earth a major clean water victory when it denied an appeal from the D.C. sewer authority to reverse our lower court ruling requiring the EPA to enforce stricter pollution standards. Polluters were disguising huge releases of contaminants in waterways by only measuring pollution levels on an annual basis; however, our precedent-setting victory will require daily limits on pollution discharges.

In other pollution news, our oceans and marine work not only won victories to reduce pollution from cruise ships on the west coast but broadened the campaign to combat pollution from all ocean-going vessels.

Pollution comes in many forms, and Friends of the Earth is fighting to eliminate sources of toxic pollution in industry, as well as in our homes. Our cancer prevention campaign with the Breast Cancer Fund and others continues to expand. To date, more than 500 cosmetic companies have pledged to remove cancer- and birth-defect causing chemicals from their personal care products.

This last year also marks the expansion of our health and environment campaign to include an important fight for consumer protections against experimental nanotechnology, chemical-laden fire retardants found in furniture and household products, and the emerging but unregulated technologies aimed at manipulating and creating life forms with synthetic biology.

In the coming year, you can count on Friends of the Earth to mount even stronger initiatives for energy solutions to fight global warming, to keep pressure on exploitive companies and prevent harm to human health, to battle injustices in communities both at home and abroad, and to protect our lands, water and air from pollution and human destruction. We appreciate your support.

Sincerely,

Dan Gabel

Dan Gabel
Board Chair

Norman Dean
Executive Director

Energy and Your Future

According to the United Nations' Intergovernmental Panel on Climate Change (IPCC) Fourth Assessment Report, it is "unequivocal" that the earth's climate is warming due to human activity. We can and must reduce global warming and its impacts such as fires, storms, drought, disease and floods on public lands and communities at home and abroad.

Friends of the Earth is promoting a clean energy plan to put the country and the globe on the right track to avert impending global warming disaster. These efforts include new legal victories that set the stage for immediate greenhouse gas regulation, new tax and subsidy policies that move U.S. resources away from oil and toward clean energy alternatives, and new requirements to achieve fuel conservation and reduce emissions from commercial ships, passenger vehicles, and coal-fired power plants.

April 14 - FoE joins concerned citizens and fellow campaigners on Capitol Hill, demanding congressional action on carbon emissions

Winning a Supreme Court Victory on Global Warming

Friends of the Earth, 12 states, several cities and more than a dozen environmental groups won a Supreme Court decision requiring the EPA to regulate greenhouse gas pollution from passenger vehicles. Friends of the Earth was one of the groups that filed the initial petition to EPA.

Forcing the Bush Administration to Report on Global Warming

Friends of the Earth and two other environmental groups won a lawsuit against the Bush administration for its failure to conduct mandatory assessments of the impacts of global warming and for its suppression of scientific reports that guide federal research and policy on global warming.

Changing the EPA's Fuel Economy Testing

This year the EPA acted upon Friends of the Earth's 2005 petition to revise its incorrect methods for calculating fuel economy of new cars. As a result, fuel economy stickers on 2008 cars and beyond will be much more accurate, informing buyers of the real-world gas mileage they will get from cars they consider purchasing – as much as 10-30 percent below mileage previously claimed.

Fighting for Cleaner Fuels and Cars

This year Friends of the Earth continued to fight for a cleaner California by pushing for environmental standards in low-carbon fuel legislation. In addition, we were instrumental in passing a "Green Fleets" bill that mandates that California must take into account the lifetime pollution emissions of vehicles the state purchases and to meet a 20 percent reduction in overall fuel use by the year 2020, mainly through the purchase of alternative fuel cars. And finally, we helped secured \$80 million per year for clean air projects and \$120 million to fund petroleum reduction and alternative fuel projects, including plug-in hybrids.

Eliminating Handouts to Big Oil

As a part of the first 100 hours of legislative activity, the House of Representatives – under the new leadership of Speaker Nancy Pelosi (D-Calif.) – passed the CLEAN Energy Act of 2007, a bill that repealed \$14 billion in handouts to Big Oil and invested the money in a clean energy fund to pay for investments in energy efficiency and renewable energy. Friends of the Earth was at the forefront of the fight to amend tax breaks for oil and gas companies.

Building an International Coalition on Global Warming Impacts

Friends of the Earth works to expose the impacts of global warming on the world's poorest who are most likely to suffer from floods, droughts and famine caused by climate change. Friends of the Earth hosted a summit and led the creation of a Climate Change and Development Network to engage in the development impacts of climate change. The coalition of environmental, faith and development groups convinced Congress to include a provision in the House Energy bill requiring the U.S. to take responsibility for its prominent role in global climate change impacts and assess the needs of poor communities trying to adapt to climate change.

Educating Investors on Climate Risks

After five years of tracking corporate reporting of climate risks to investors, Friends of the Earth's work paid off when the New York State Attorney General's office subpoenaed five energy companies to inquire whether their plans to build new coal fired power plants posed undisclosed financial risks to shareholders.

Creating the Capital Climate Coalition

Friends of the Earth and the D.C. Environmental Network are working to get climate protection policies signed into law in the nation's capital. Due to our efforts, the District's legislative body, the D.C. Council,

recently introduced a bill to strengthen D.C.'s existing Renewable Portfolio Standard (RPS) to bring more wind and solar power to the city. And now the Council is introducing legislation to create an energy efficiency utility for the D.C. area.

This utility would target residential and commercial buildings in our nation's capital, which are responsible for more than 70 percent of our carbon emissions with the goal of encouraging energy efficiency. We have also successfully pushed the D.C. Council to introduce a bill to adopt California Clean Car standards in D.C., and as a result of our work D.C. Mayor Fenty is supporting the bill. Most recently we convinced the District to join the Regional Greenhouse Gas Initiative to develop strategies for controlling emissions in the Northeast and Mid-Atlantic.

Improving Public Transit

Friends of the Earth helped a local group develop an online trip planning utility for MARTA, the Atlanta-area public transit service, in an effort to increase the use of rail in the Atlanta area, benefiting Georgia residents and helping to curb global warming emissions.

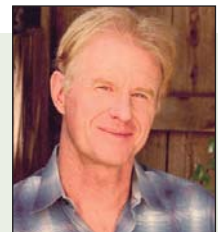

Brent speaks at a rally on climate change

“

Friends of the Earth was the first environmental group I joined, back in 1970, the first Earth Day. It was the same year I bought my first electric car. I saw a publication on a newsstand called *Not Man Apart* and I picked it up and started reading it. It said some things that caught my attention and really interested me. David Brower was involved in Friends of the Earth then and he said, "Capitalism is a great idea – we ought to try it." He meant that there was value in so many things that we needed to conserve – our forests, our natural resources – just as there is value in money. It just doesn't make good economic sense to focus on the short term dividends while we are liquidating all our resources, all the things that support us. I think about what our kids will say if we don't take care of things – how will they judge us? We can't just have a big party and let them clean up after us. How will they think of us? I want my kids to have something left that allows them to connect to the places they live, and a chance to live in a beautiful country.

— Ed Begley, Jr.

”

Justice for Global Communities

Foreign investors and financial institutions, primarily based in the U.S., finance projects around the world that permit the exploitation of natural resources and labor, leading to environmental degradation and increasing pollution. The harm caused by these activities falls most heavily on those in developing countries.

Friends of the Earth’s unique international network of groups in 70 countries gives us leverage as we examine the impacts of natural resource extraction and energy policies abroad as well as the consumption patterns that support exploitation. Friends of the Earth and its partners work to ensure that U.S. investment and consumption does not harm the environment and people but instead promotes environmental protection and poverty alleviation.

Accountability in the Democratic Republic of Congo (DRC)

Friends of the Earth is advocating for the DRC’s equitable access to its natural resources, increased oversight of foreign investments and substantial environmental protections to mitigate major water pollution and ecosystem destruction. We are investigating U.S. corporate operations in the DRC and are coordinating with representatives from the DRC as well as U.S. legislators to advocate for a more transparent and thorough review of natural resource contracts.

Shaping the Biofuels Boom

Friends of the Earth is leading an effort to minimize the harmful social and environmental effects of the biofuels boom. This year we produced an online database that enables users to compare the environmental and social impacts of a wide range of biofuels used in transportation. Our research led Congress to consider the liabilities of greenhouse gas emissions from biofuels production in energy legislation. Our international coalition is pushing for U.S. standards in biofuels legislation covering imported fuel that will mitigate environmental damage from biofuels production such as increased fertilizer use, consumption of scarce water resources, clearing of tropical forests for biofuels plantations, and further consolidation of corporate agribusiness.

Halting Corruption in Liberia

Friends of the Earth leveraged its expertise in foreign investments abroad in order to aid Liberian civil society and government officials in contract renegotiations with Firestone Rubber Company. In addition, Friends of the Earth collaborated with U.S. and Liberian civil society organizations on an international donor community “report card” rating the effectiveness of international donor projects. Following up on one of our “report card” recommendations, funding has increased for Liberia’s Environmental Protection Agency so it can develop and enforce sustainability initiatives in the country.

A young boy working on a rubber plantation in Nigeria

Raising Awareness of Chinese Investments in Africa

Friends of the Earth’s new program to advance sustainability of Chinese investments already boasts two publications on the role of Chinese investment in Africa. In addition, we organized the first ever workshop to teach shareholder activists how to use their shares in Chinese equities to push for more environmentally and socially responsible behavior at Chinese companies. The workshop and published articles are just two in a stream of opportunities that the program has had to educate policy makers and the public on the environmental impacts of Chinese investments.

Protecting Our American Legacy Lands and Waters

The quality of any nation's land and water resources are a barometer of its health. However, in the U.S., public lands and waters are under siege by extractive industries seeking profit from oil, gas and timber; by corporate polluters without any accountability to local, state and federal departments responsible for enforcing pollution regulations; and by industries that seek to open national park lands to off road vehicles that destroy habitats and pollute. On the west coast our campaigns cover national park preservation and cleaning up the shipping industry. Our campaign covering D.C. issues is focused on developing local responses to climate change, cleaning up area rivers, and promoting safe drinking water.

Winning Important Victory for Clean Water

In January, the Supreme Court handed Friends of the Earth a victory when it let stand a 2006 ruling that the EPA plan to limit the amount of pollution dumped into the Anacostia River violated the requirements in the Clean Water Act to set pollution caps on a daily basis. The EPA plan instead set annual limits that allowed for highly toxic levels of pollutants to be dumped at any given time as long as the yearly average didn't exceed a certain level of pollution. The Supreme Court ruling means that any party dealing with a daily maximum pollution issue – whether the pollution comes from sewage, industrial discharge, or non-point sources – can reference the precedent-setting decision in this D.C. Circuit case.

Passing Stormwater Management Regulations

Friends of the Earth and the D.C. Environmental Network led a coalition of environmental, low income housing, and jobs organizations to pass some of the best stormwater management regulations in the nation designed to protect the Anacostia River and residents of the greater D.C. area.

Expanding Big Thicket National Preserve

Friends of the Earth won a settlement in which Chevron, after being found guilty of violating pollution laws, agreed to fund the addition of more than 1,600 acres of wetlands to the Preserve – ending a 13-year lawsuit from Friends of the Earth. The wetlands will provide a natural storm buffer.

Cutting Cruise Ship Pollution

Friends of the Earth's advocacy led to a \$1.9 million clean-air grant for the Port of San Francisco to install shore side power for cruise ships, which is predicted to prevent 18 tons of ship air pollution from entering the air at the Port and in the San Francisco Bay region each year. In Seattle, our advocacy led to major revisions of proposed port development, and improved cruise ship air and water pollution protections. The Port of Seattle will require cruise ships that visit five or more times per season to plug into shore side power or burn only cleaner, low-sulfur fuel when in port. In addition, a new environmental plan was passed that includes a sewage dumping ban in the Olympic Coast National Marine Sanctuary.

I admire Friends of the Earth's integrity, commitment to addressing the root causes of environmental destruction, and practice of pioneering high-leverage strategies to effect change. This has made Friends of the Earth an exciting and fulfilling place to work, and has kept me here for twelve years!

— Michelle Chan

Human Health and Safety

Companies out to seek profit at any cost are endangering our health and environment. Since World War II and the “chemical revolution,” companies have created nearly 100,000 different chemicals, less than 10 percent of which have been tested for health and environmental impacts. This chemical soup is present in everything from computers, furniture, and even the products that we apply to our bodies.

In addition, many of these same companies are facilitating a technology convergence that is merging the concepts of nanotechnology and extreme genetic engineering in an audacious effort to fundamentally remake the building blocks of life and matter. Across the country, trains carrying hazardous materials such as chlorine gas place urban populations at risk from accidents and sabotage. Friends of the Earth focuses on establishing stricter regulations on technologies and business methods which pose a serious threat to human health and safety.

Building the Movement - New Signers of the Compact for Safe Cosmetics

To date, more than 500 companies representing more than \$4 billion in annual sales have signed our “Compact for Safe Cosmetics,” a pledge to make safer products and eliminate toxic chemicals from cosmetics and other personal care products.

NEW CAMPAIGN! Eliminating the Threat of Synthetic Biology

Friends of the Earth’s synthetic biology campaign aims to safeguard the genetic material that is the basis of all

life from commercial uses that would exploit and irrevocably alter naturally existing life-forms. Companies are attempting to engineer entirely new, man-made biological systems through computer technology, nanotechnology, biotechnology, artificial intelligence, robotics, cognitive science and other disciplines. We are fighting for a moratorium on the development and marketing of this technology until safeguards are put in place.

NEW CAMPAIGN! Stopping Gene Patenting

Biotechnology and pharmaceutical research companies are cornering the market by acquiring patents for newly decoded genetic material, a practice that has led to the patenting of up to one fifth of all human genes. Friends of the Earth is against the patenting of all life, especially the patenting of human life which has prevented proper healthcare treatment and research. Patents on human genes prevent people from obtaining information about their own genetic makeup by allowing companies to charge high royalty fees on tests and be selective in granting licenses to other researchers. This prevents people from gaining proper treatment for their genetic diseases and drastically hinders therapy research. We are working on a bill aimed at stopping human gene patenting.

Exposing Dangerous Nanoparticles in Sunscreens

Friends of the Earth released a report alerting consumers to the possible dangers of nanoparticles in sunscreens. The report rated over 120 manufacturers based

My interest in the environment emerged in 2000. Around that time, I kept seeing [Friends of the Earth Board member and Bluewater Network founder] Russell Long’s name in the paper and thought, ‘I have to meet this guy!’ and so we went out to lunch and I fell in love with the organization. It’s that sense of accessibility and the opportunity to have a voice that makes Friends of the Earth unique. My interaction with Russell and the organization ultimately fueled my need to work full time for the environment and now I help run 3Degrees, a company that uses market-based mechanisms in promoting renewable energy to help reduce climate change. I’m also proud to say that Bluewater was one of our first customers.

— Steve McDougal

on their policies regarding this new technology that involves the manipulation of matter at sizes much smaller than a human hair. We are now working with Friends of the Earth Australia to examine the risks of putting nanoparticles in food.

Re-routing Toxic Trains

This year President Bush signed into law hazardous materials re-routing legislation to protect 46 cities from toxic terrorism. This national legislation springs from the efforts of Friends of the Earth and the D.C. Environmental Network to ban toxic trains from traveling through Washington, D.C., and will protect millions of city-dwelling Americans from potential attacks.

NEW CAMPAIGN! Safeguarding Families Against Toxic Fire Retardants

Friends of the Earth initiated a Safe Kids campaign to ban toxic fire retardants in household products including upholstered furniture, mattresses, toys and carpets. These fire retardants have been associated with autism and hormonal abnormalities and their prohibition will protect the health of millions of children and others in California. Friends of the Earth is conducting research for a report documenting the high levels of fire retardant chemicals in furniture, which will be released in 2008.

Board member Russell Long, Ruth Krumbhaar and California State Assemblymember Mark Leno participate in a rally urging a ban on toxic fire retardants in furniture

Harriett Crosby and Jayni Chase present Dan with a fellowship in his name

Announcing The Gabel Environmental Fellowship

In recognition of Dan Gabel's extraordinary generosity of his time and resources to Friends of the Earth, Dan's fellow board members recently honored him in a surprise ceremony to announce that they have established an environmental fellowship in his name. The fellowship will be awarded in the form of stipends to deserving students and recent graduates interested in working on one of Friends of the Earth's campaigns while gaining valuable, real-world environmental protection experience.

Dan's long-term leadership for Friends of the Earth began in 1971, when he and his wife, Bunny, provided office space for the fledgling organization in their own home in New York City. He became the first treasurer of Friends of the Earth Foundation and served for 10 years. As a graduate of Duke University and a member of the advisory board for the Duke School of Environment, he established a David Brower internship at the Duke School of Environment for interns to Friends of the Earth. He also provided a Friends of the Earth International scholarship fund at the University to be used by any Friends of the Earth employee who wants to get an advanced degree from the School of Environment.

Dan has served on the Board of Directors since 1990 and as Board Chair in 2006-2007. The fellowship honors both Dan and Bunny's love for Friends of the Earth and their commitment to supporting strong education for students.

To make a gift to the Gabel Environmental Fellowship Fund, contact Marsha Mather-Thrift, Director of Development and West Coast Operations, at (415) 544-0790 x 13, or mmather@foe.org.
